

Hey y'all,

I went to office hours and talked to Prof. Torresani. He thought the syllabus idea was much more interesting.

He suggests we go with that, but discourages us from using Dartmouth, as he thinks the syllabus collection process will be too difficult and take too much time.

So, if we want to do this project, we need to look for a college that publishes its medians and syllabi (Torresani was perfectly happy with us using other institutions).

He also gave us some suggestions for algorithms (decision trees, neural networks, support-vectors regression). Discussed features a bit too (length of the syllabus itself should be important, amount of bolded/italicized text might be important).

So:

1. Can we still meet at 8:30 tonight to hammer this out?
2. Can y'all look for colleges that post the data we need? I'll do the same. I think a well-known college would be preferable.
